

What is naloxone?

- Naloxone (Narcan, Evzio) temporarily stops an opioid overdose by blocking its effects on the brain.
- Naloxone does NOT work for overdoses involving alcohol or non-opioid drugs such as stimulants or benzodiazepines.
- Naloxone is safe to use and unlikely to cause harmful effects even if given to someone who is not overdosing on opioids.

Why do I need it?

- Anybody taking an opioid has a potential risk of overdosing.
- An overdose can occur even with proper use.
- Opioids can slow or stop breathing, leading to loss of consciousness or death.

Signs of an opioid overdose:

What are opioid medications?

You probably know that

Hydrocodone
Morphine
Oxycodone
Fentanyl

You may not know that

Tylenol 1, 2, 3 and 4
Meperidine (Demerol)
Tapentadol (Nucynta IR)
Methadone
Buprenorphine

are opioid medications.

are also opioids and carry the same risks.

How to Respond to an Opioid Overdose

1

SHOUT & SHAKE

Shout their name and shake their shoulders

2

CALL 9-1-1

If unresponsive

3

GIVE NALOXONE

1 spray into nostril or inject 1 vial or ampoule into arm or leg

4

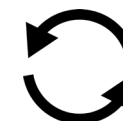

PERFORM RESCUE BREATHING AND/OR CHEST COMPRESSIONS

5

IS IT WORKING?

If no improvements after 2-3 minutes, repeat steps 3 & 4. Stay with them.

An opioid overdose can happen to anyone taking an opioid

2

Naloxone nasal spray — Intra-nasal naloxone is for the nose.

It is easy to use and works even if you need to give it to a person who is not breathing.

How to give naloxone nasal spray:

- Peel the package open and hold the device. Do not press until ready to give naloxone.
- Place the nasal end in the nostril.
- Press plunger firmly to spray.

How to stay safe on opioid medications:

Do not drink alcohol.

Do not start any new medications without talking to your doctor, nurse practitioner, or pharmacist first.

Do not share medications.

Store medications in a safe and secure place.

Take your medications exactly as prescribed. If you have questions, ask your prescriber or pharmacist.

Who is eligible for a Naloxone kit?

- Anyone who is currently using opioids
- Anyone who is a past opioid user who is at risk of returning to opioid use
- Anyone who is a family member, friend or other person in a position to assist a person at risk of overdose from opioids
